- **Coding**:   User Interface, User Experience

- **Programming Languages**:   C, C++, JavaScript, PHP, Java, Python

ACADEMIC PROJECTS

HealthCare- Web Application (VI Semester)

A *Health Care* is an intelligent machine learning system that helps patients understand their symptoms and identified potential diseases based on the information they provide. Additionally, it features a real time doctor-patient chat implemented using socket communication enabling patients to consult doctors instantly for further advice or clarification.

Student Grading System- Web Application (V Semester)

The *Student Grading System* is a software-based application designed to automate the evaluation and management of student academic performance. It provides a systematic, efficient, and transparent method to calculate, record, and display student grades based on their marks or assessment criteria. The system helps institutions maintain accuracy and reduce manual workload.

LANGUAGES

- Nepalese: Native
